HealthSoft Completes Saint Anthony Physicians Network Medical Claims Processing System Installation

Scottsdale, Ariz. (December 2, 2005) – HealthSoft Enterprise Systems, a provider of healthcare information systems and services to managed care organizations, announced that Saint Anthony Physicians Network of Indiana, which selected HealthSoft for its managed care claims processing and adjudication in 2004, has successfully completed the installation of HealthSoft's Mcare™ system after a complete conversion from their previous existing system.

Saint Anthony Physicians Network is a non-profit managed care organization that has been delivering cost conscious, high quality healthcare to a four-county area of Northwest Indiana through the practice of efficient medical management techniques. Comprehensive in scope, the Network is locally directed and offers a healthcare delivery system that provides businesses, industry and insurance companies with uniquely tailored health insurance products.

"HealthSoft dedicated an enormous amount of time, energy and hard work to successfully complete the installation ahead of schedule. The organization has become very familiar with the new system and been able to cut overhead costs. They are keeping current with all their medical claims processing," said Joseph J. Hughes, President and Founder of HealthSoft Enterprise Systems.

HealthSoft's Mcare system is an affordable, fully functional and integrated managed care system designed effectively to administer health plan contracts, operations, pharmacy claims, credentialing, medical claims processing and adjudication, network providers and penalty calculations. Mcare™ is HIPAA compliant with the ability to electronically process all ANSI standard transactions.
